

WHITE SOUND BACK-UP ALARMS

NOW AVAILABLE AT HARMANS

BRIGADE®

**TIRED OF NOISE COMPLAINTS FROM
IRRITATING SINGLE
FREQUENCY BACK-UP ALARMS?**

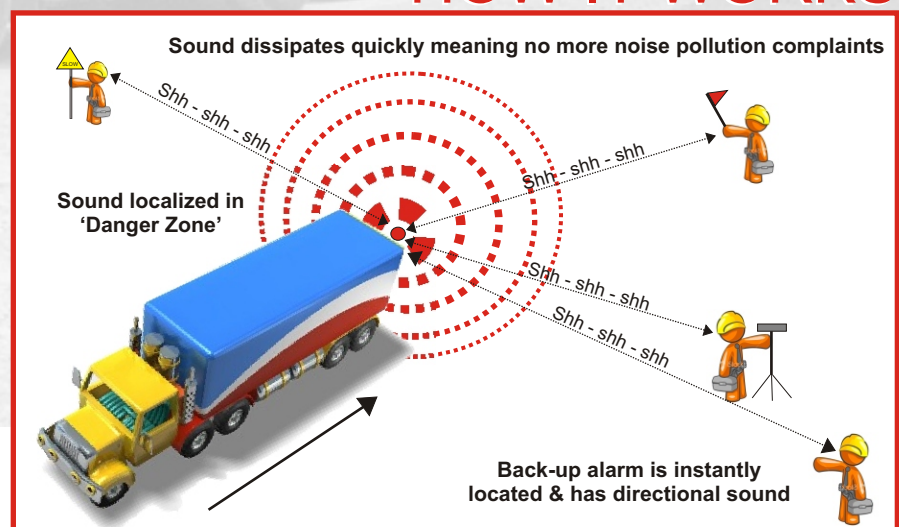

**Harman's has your solution with
'White Noise Broadband' Back-up Alarms!**

'White Sound' (or broadband sound) uses a pleasant 'shh-shh-shh' sound as a back-up alarm rather than the irritating high pitched, high decibel single frequency alarms.

White Sound uses all frequencies in the audio spectrum which allows it to be instantly locatable and also does not have to rely on high sound pressure (or decibels) in order to be heard because no competing single frequency can mask it.

As a result a white sound alarm is equally effective at lower decibels than single frequency alarms but is also instantly locatable and directional with no more head-spinning and confusion.
